

GUMS NATURALLY

Some things that we use to help your gums stay healthy.

The magic of Pharmaden

We have used their nutraceuticals for years and years. They work, as advertised, but you have to take them daily.

Perio-Therapy

Quite simply put, this speeds the gum healing process from the inside out in about half the time, given that patient's healing mechanism is not impaired. For those with anything less than a severely impaired mechanism, it definitely helps too.

Osteo-Therapy

This slows bone loss and can increase bone density. For a few lucky ducks, it will actually grow new bone. For the folks who choose to go long term with these, the vast majority do well and avoid gum surgery. For those who use these after any kind of oral surgery, the vast majority just heal faster and better. For those who have any kind of grafting, they are fabulous.

Liquid Gold for Your GUMS!

It took me a while to stumble upon this one but it is sure fire proof that word of mouth still works (no pun intended). Another dentist told me about this stuff years ago. So, I decided to give it a try and while there is no one perfect product, this is the best I have seen in nearly forty years. You've gotta use it right and when you do, it's like pow, zap, dead! Bye-bye to bad bugs that cause gum disease and Buffalo Breath, and it leaves the good bugs alone. Not a bad one, two punch if you ask me! Please keep in mind that you still have to brush and floss! Yea, I know, but an ounce of prevention is still worth a pound of cure. Brush, Floss, Brush, Floss, Brush, Floss, some things do not change. BRUSH, FLOSS!

PUTTING IT ALL TOGETHER

- **BRUSH** with T&G paste.
- **RINSE** for 60 sec. with T&G tonic.
- **FLOSS** between all of your teeth.

It only takes a small amount of T&G paste, so be chinchy. You only need a one-third of a cap of T&G tonic and you must rinse 60 sec. to get real results. That's forever in our millisecond society but herbs need time to work. Then FLOSS them toofies. Then take your Pharmaden nutraceuticals every day.

COLD STONE FACT: When your in this program, or a form of it, you need to be seen every three months, NO KIDDING!! We need to clean the deeper pockets out for you, irrigate with health preserving ozone, and we need to monitor your gum health.

Dr. Madson has two doctorates a DMD in Medical Dentistry and an NMD in Naturopathic Medicine and he is adjunctive faculty at Georgia Regents University (The Medical Collage) Collage of Dental Medicine in the General Practice Residency. where he teaches and lectures and has done so for a decade. He is also certified in the ND YAG Laser, stem cells, biologic dentistry, and is also Board Certified in Botox and Facial Fillers.

OZONE! A MEDICAL & DENTAL MIRACLE!

Ozone is a multi-page topic in and of itself. The things it can treat in the mouth and the systemic diseases it can make better are truly astounding. I, myself, am a walking, talking, testimonial to the miracle that ozone is. As this is about the gum-toozies, we shall go in that direction. A brief literature search turns up several articles on ozone's germicidal effectiveness in treating gum disease. I shall discuss my clinical observations over the past nearly five years. Again, it does not cure gum disease, however, it does help control it and has helped for almost everyone we have used it for. It can be provided at a fraction of the cost that a pharmaceutical company would charge. When using other pharmaceuticals that are placed under the gums in the most conservative way, each patient treated would have to pay anywhere from one hundred dollars to hundreds of dollars. Ozone can be placed in these same areas painlessly and at a fraction of the cost. In addition, folks routinely report less discomfort and faster healing, along with equal to or better results than when we used another pharmaceutical.

Next on our agenda is the use of ozone to kill early cavities and heal the tooth in lieu of a drill and fill. While this technique can not be used for every cavity, it can be used as a preemptive strike on very early developing cavities. This technique I've worked out myself and we have been successfully using it for about three years now. I gave a presentation on this technique to a room full of dual degree dentists in the summer and it was well received. For those of you who have had this done I think you will agree that it's PRETTY COOL. Ask any of our kiddos what they think of no shots, no drill, and no fill.
